```
while __test__ :
    statement
    statement
    more statements...
statement
statement
more statements...
```

The *test* must be something that is True or False.

The indented statements are called the body of the loop.

```
Statement
   │
   ▼
  IF  ──── test is True ────▶  Statement
   │                              │
   │                              ▼
test is False                 Statement
   │                              │

```

Common idiom for asking the user if they want to keep looping:

```python
# Set up a variable to manage the loop.
keep_going = "yes"
while keep_going == "yes":

    # Put whatever you want to happen
    # multiple times in this space.

    # Ask the user if they want to do it again.
    keep_going = input("Do you want to keep going? ")
```
